

# **A STUDY AND IMPLEMENTATION OF AN ONLINE WAREHOUSE MANAGEMENT INFORMATION SYSTEM FOR FREEWAY WMS**

Prepared by: Shamsudeen Yakubu Tanko

## **ABSTRACT**

---

This double module project deals with the activities and operations regarding the management of a warehouse and the functions and features such as stock management and information, sales record, supplier information, invoice, and report generation. Furthermore, the techniques and processes that are carried out towards the fulfillment of the daily operations in the warehouse are investigated and ways of improvement are suggested so as to produce a system using ASP.NET technology which will be able to provide solutions to the problems that are faced in the daily operations.
