

# DESIGN AND DEVELOPMENT OF A WEB PORTAL FOR WORLD CUP SOUTH AFRICA 2010

Prepared by: Ahmed Umara

## ABSTRACT

---

The purpose of this project is to design and develop a web portal for the upcoming World Cup taking place in June and July this year in South Africa. It will provide fans with the necessary information about the World Cup e.g. fixtures, host cities, stadiums and guides. They will also be provided with the history of the Cup and can register as members to purchase tickets and view hotel and flight details. The portal will allow users to access information about South Africa and also share their views on various topics through the forum, the users will also have the opportunity to purchase travel packages from the portal like going on safari, sightseeing and trips to various parts of the country.

The web portal will be designed and developed using ASP.NET as the key technology and SQL server to design the database.
