

# **A STUDY AND IMPLEMENTATION OF AN INFORMATION PORTAL FOR BREAST CANCER AWARENESS**

Prepared by: Fatima Tijjani Saleh

## **ABSTRACT**

---

This project's main purpose is to develop and implement a knowledgeable and information based system for breast cancer awareness. The project calls out to educate users on what Breast Cancer is and researches on its consequences, risks, treatments and turmoil's. It exposes the significance of an information portal and its aid to the world and basically to individuals with breast cancer. The system will be equipped with chat-room functionality for real-time communication as an education medium for potential users and breast cancer specialists. The system will contain some features such as the database which is designed to keep and safeguard user's information the system will be able to benefit all users who are interested to know more about the topic of breast cancer.
