

STUDY AND IMPLEMENTATION OF A SOCIAL NETWORK FOR MUSICIANS AND MUSIC PRODUCERS

Prepared by: Samuel Uyiosa Osifo

ABSTRACT

This project is all about developing a social network where the users are mostly musicians or musically inclined individual. Unlike the normal social networks which already exist, the proposed MusicMate social network will allow users to conduct transactions over their accounts on MusicMate. These transactions are made possible with the uploading of music feature which the proposed system has. The users will then be able to sell music to other users through their profile pages. This is a good means for upcoming musicians who want to gain popularity and sell their music but do not have enough capital finance to do so. So therefore MusicMate acts as the business tier to such individual while providing the basic social network functions.
