

# DEVELOPMENT OF C2C WEBSITE WITH RECIPE SELECTION FOR HOME CHEF CORNER

Prepared by: Iva Christina

## ABSTRACT

---

This project focuses on the research of Customer to Customer E-Commerce with the supporting of E-Learning interaction features for “Hone Chef Corner”. Basically, it is a website which contains a lot of information about food recipes. The members may share their own recipes among all. They also can sell their own recipes to the other user. Besides, they can also choose from the recipes to make them as the weekly menu. They can reorganize or change the menu daily every week. On top of that, this website provides video clips that teach people on cooking, introduction of ingredients, discussion forum, and leave comments.

This project’s objective is to help people to exchange the recipes which will be very helpful for them who are not good at cooking to improve their own cooking skill, with the organization of weekly menu; the members do not need to think about what they want to cook every day. It will save their time and create an interesting environment to learn more about cooking. This project will be created by using ASP.NET technology with the aid of Microsoft SQL Server 2005.

The author hopes this project will be able to meet the demand of busy and hectic lifestyle of people nowadays. With the interaction features in E-Learning, this C2C website is believed to be interesting and friendly to be explored by the public.
