DEVELOPMENT OF AN EVEN MANAGEMENT SYSTEM FOR AJKS CONCEPT AND EVENTS COMPANY (ACE)

Prepared by: Rabi Abdulazeez Dankano

ABSTRACT

This project studies and evaluates the Online Event Management System of AJKS Concept & Event Company where its customers can access from anywhere, and anytime. It's a web-based system where is consists of different categories of events for its customers to choose from. It also has an online rental shop where the customers are able to rent events supplies, such as tents, chairs, caterers and catering supplies. The company will be able to book customer on what is available via the event calendar and the best option that they need in the type of event they want to organize. They would also be a feedback page where the customers can ask questions about their events or when they have something to share. The proposed system will allow customers to access the system through registration and from all around as long as the event is pertained in the same region as the company. This project aims to increase the social standing of the company as well as the country both locally and globally as well as increase the technologies used by the company to be more effective, efficient and it's a faster means of communications. The main technology concerned in this system is ASP.NET and SQL for managing the data such as customer's details or event details.
