

DEVELOPMENT OF AN INTERACTIVE MULTIMEDIA TEACH WARE ON FIRST AID FOR BEGINNERS

Prepared by: Lim Huey Xiang

ABSTRACT

This project studies and implement a multimedia element in creating First Aid learning teach ware for beginners. This project will teach about first aid products included in a first aid kit, what to do in case of emergency, or they might not be clear about the explanation or ways of teaching from the book or the trainers regarding the above topic without any visual aid. It is very hard for people to imagine the things that they are learning. This project will consist of a video, 2D and 3D multimedia element that in order to make the teaching process more effective and efficiency. This project also can help to maximize the memorizing and understanding for the first aid. The target audiences for this project are mainly those who want to learn the basic first aid skills.
