A STUDY AND DEVELOPMENT OF A SWISHMAX TUTORIAL PROTOTYPE CD FOR BUSINESS PRESENTATIONS USING MACROMEDIA AUTHORWARE 7.0

Prepared by: Sim Ai Ling

ABSTRACT

This project aims to study SwishMax. And to investigate and develop a SwishMax tutorial CD using Macromedia Authorware 7.0 for users who deal with many business presentations. It is tailor-made for those who need to enhance their current presentation slides with attractive and attention grabbing simple animations. At the same time, a study of the SwishMax features will be done in order to develop any information resources like built-in effects, Swish script, drawing, input and dynamic text, and import and export into any business applications. This tutorial CD is most useful to those literate users who are not onto much programming for animations.
