

# **A DEVELOPMENT OF AN INTERACTIVE MULTIMEDIA BUTTERFLY FUN-LEARNING EDUCATION SOFTWARE FOR CHILDREN ABOVE 12 YEARS OLD**

Prepared by: Goh Lee Meei

## **ABSTRACT**

---

This is a project for the children to discover the interesting world of butterflies. There are hundreds of different types of butterflies around the world. In this project, the author will introduce some common types of butterflies and information such as which favorite flowers to the butterflies like to fly to, and the common places to find these types of butterflies. To start learning about the butterflies, the children can click on different parts of the butterfly's body to see the description. When children feel bored to learn, they can play the butterfly's game, which is easy to play and understandable for children. The author will use the more interactive approach to present the butterfly's information. This can attract the children's attention and they will be willing to spend their time on education on butterflies.
