

STUDY AND CREATING A SECURE APPLICATION TO SPILT AD MERGE FILE

Prepared by: Edo Sugito

ABSTRACT

This project studies about how to split a file and how to join back the file that has been split. The project will develop a program that overcomes less security and lack of space. From the title, we know that the program will split a file into several chunks which cannot be open directly. It can be opened only when it has joined together back. The scope of this project is all about the splitter and the joiner of a file. By the end of the project, it will help people to increase the security of important file and help people who have small transfer media such as flash disk.
