

IMPLEMENTATION OF CLIENT AND SERVER COMMUNICATION USING REMOTE METHOD INVOCATION (RMI) TECHNOLOGY IN HETEROGENEOUS ENVIRONMENT

Prepared by: Wong Aining

ABSTRACT

In this documentation, the author has understand what id RMI and how to use it as well. The author has decided to use this technology to produce a system, which implement in share market. This project is developed using the JAVA JDK 1.3 version language. Due to RMI is inherited from JAVA, by using Java language it will show the powerful of RMI. The author has study the current system, which is using Visual Basic. There is some limitation of that system. So, the author has come out a new interface, which almost likes the current system. Finally the author hopes that the system really can help stock brokerage firm to solve their problems.
