

# HEARTBEAT MACHINE

Prepared by: Kong Yen Sun

## ABSTRACT

---

**What** is a heartbeat machine? It is a small machine that can be used to measure a person's heartbeat and then to obtain his or her pulse rate. How is it working? Just by placing out finger in the transducer. It is impossible. Wheat we need to do is just the finger into the hole in the casing of the transducer and we will be able to get our pulse rate. We can obtain out pulse rate by using this simple machine and without visiting the doctor's place. The test no longer testing uses the scientific machine, which use by the doctors.
