ELECTRONIC PARROT

Prepared by: Yap Kian Onn

ABSTRACT

This project is a process of developing a digital voice recorder with automatic playback system which can be placed in a toy Parrot as a form of entertainment and fun learning experience. In this final report, a detailed description of each relevant component and the constructing process would be described. Block diagrams and circuit diagram relevant to the Electronic Parrot have been inserted for reference purposes to a better understanding on how each component are placed and how it works. Results from analysis and tests conducted on the circuits will also be shown for the interest of parties concerned.
