

BATTERY TESTER

Prepared by: Firuz B. Ab Patah

ABSTRACT

In a project, it is very important that the student understands and be able to analyses the circuit as well as obtaining a great result for a project. So, using all my knowledge that I have learned in the past semester in INTI, I make this project, that is the Battery Tester. All the information about the circuit, construction and components are explained in the body. Firstly, the explanation of the project are, this battery tester is a new age battery tester that are using only LED to measure the voltage capacity of a 1.5V and 9v battery, this is a new concept of battery tester, it is small, compact and cost effective.
