

A Study and Implementation of an Online Interactive Multimedia System Entitled 'FunDesk' using Macromedia Flash and PHP

Prepared by: Lai Chin Yau

ABSTRACT

This project investigates the potentials of creating an interactive computer desktop-based application by combining Flash and online database connection using PHP, delivering an information navigational system in order to enhance user's experience in desktop environment. Research on interactivity design principles, flash animation techniques and scripting will be conducted to build the system. The second focus contributes to the research on the human computer interaction technique to improve user interface design and gain system attractiveness. This project aims to enhance the current windows desktop environment by moving it towards interactive digital world. Creativity of design & innovation of ideas are greatly required to enrich the overall project.
