Project Management Software Tool for Managing and Tracking Project

Prepared by: Kee Chia Ern

ABSTRACT

This project is mainly about the development of a web based project management tool to track and manage project. It involves an in-depth study of the architecture of a web based environment as well as project management concepts which are required to develop the system. This documentation is arranged accordance to the development phase following the standard software development flow. It started with the literature review and proceeded to the study and analysis. With the analysis, the design phase would be design and followed by system construction and testing.
