

A STUDY ON THE MOBILE SERVICE TECHNOLOGIES TO DEVELOP A FEASIBLE EXAMINATION RESULT INQUIRY SYSTEM FOR INTI COLLEGE STUDENTS

Prepared by: Boon Ae

ABSTRACT

This project is addressed to issue related result inquiry ad information dissemination in INTI College Malaysia. Through this project, the author would like to take the opportunity to introduce the implementation of result inquiries solution with the use of mobile technology, rather than an on foot journey to the examination center.

The project will permit students to receive their examination result by conveying through SMS (Short Message Service) and within a few seconds student will receive their result if information of the student is authenticated. Besides that, the system also allow the administrative staff to send out information through broadcast SMS en route for ensuring that students will remain up to date with the most up-to-date deeds in the college.

Students will have to initiate the process by subscribing to the services provided by the author's SMS application called InfoPanel. By being the subscribers of the SMS application, the students will be able to obtain information from management of INTI College Malaysia.
