STUDY ON NETWORK COMMUNICATION AND IMPLEMENTATION OF REMOTE PC CONTROL PROGRAM

Prepared by: Chee Keai Kong

ABSTRACT

This project is a study on a remote administration over a network and further develops a remote control program, which enables user to work on the remote personal computer. The user can access remote computer via a LAN, it remotely control a computer through a TCP/IP connection. This program will consists of two part, one is server and another is client. A server, which will generates desktop screen and provides access to client. A client is a viewer of server screen, which actually get the display screen of server from remote distance
