

A STUDY AND IMPLEMENT A SMS REMOTE CONTROLLER TO CONTROL THE SIMPLE SERVER TASK BY USING BLUETOOTH TECHNOLOGY

Prepared by: Chin Boon Tat

ABSTRACT

This project involved study on short message service gateway and implement a short message service remote control, which is use to remote control the server task. The system is for server administrator to remote control the server using hand phone short messaging service. The system will identify the SMS data which is password and task identity number, and then will execute the program to control other client computer. From the wireless technology, it will use Bluetooth Technology to connect between the hand phone and the server. It means the hand phone must have the Bluetooth connector.
