

IMPLEMENTATION OF MOBILE BASED INTI ON-LINE ACCESSING SYSTEM

Prepared by: Gan Kai Weng

ABSTRACT

The aim of this project is to study on the wireless technology and develop an On-line accessing for INTI Collage Malaysia (ICM) for mobile users. This project focuses on the wireless technology in performing the student daily activities using a mobile device such as PDA. This project also addresses the problems with the current available INTI online and to improve the efficiency of the student daily activities through online. By using their mobile PDA devices, the students do not need to go to computer lab just to download their online notes. Other than that, there are situations where students decided to check their coursework mark or results without having to go to the academic block or computer lab. It will be troublesome for them having to walk all the way to check their coursework mark or results.
