

MOBILE PDA BANKING APPLICATION SYSTEM

Prepared by: Ahmed Abdulsalam Hasan Abbas

ABSTRACT

This project is to implement a PDA bank system which the access to the server is via Wi-Fi technology. The users of the system will be able to perform their required transaction using their PDA phone enabled Wi-Fi rather than going all the way to the bank and wait for the queue. It is another way of doing the bank transactions with security feature implemented to the system. However, system consists of two subsystems: Server and client.
