

A STUDY ON THE POTENTIAL OF WIRELESS APPLICATION PROTOCOL (WAP) THROUGH THE IMPLEMENTATION OF A WAP-BASED APPLICATION

Prepared by: Chew Wee Terk

ABSTRACT

This project is basically deals with a throughout study and research on the Wireless Application Protocol (WAP) on its potential on the world of technology. The main aim here is to determine whether it is viable or feasible to implement a WAP-based program to illustrate the potential of the WAP and its application into the existing technology that is present. The main force that drives the author motivation in choosing the topic is the author's strong interest in late breaking technology and the desire to be a pioneer in the line of the Internet technologies in development of applications in the latest unexplored areas of the latest technologies. The author discovered that the WAP could bring a strong impact to the IT industry in revolutionizes the way people communicate with the Internet and among each other.
