AN ONLINE MULTIPLE-USER ORGANIZER IMPLEMENTED WITH THE ACTIVE SERVER PAGE (ASP) TECHNOLOGY

Prepared by: Yau Lee Hui

ABSTRACT

The project focuses on the development of the online multiple – user organizer implemented with the Active Server Page (ASP) technology. The online organizer includes features such as the address book, calendar or scheduler. A chat room will be provided with a whiteboard, which enables us to illustrate during sessions. Group meetings, will be able to be saved and printed. This project also focuses on issues such as notification of upcoming activities with the ability to view previous meeting's log files. As for security in meetings, only those who are involved in specific meeting can only join and participate in the meeting. As a conclusion, the development of the organizer would bring much convenience to us because we can access it anywhere when there is an online computer.
