

PROTOTYPE FOR COMPUTER BASED FACTORY OVEN

Prepared by: Pan Shin Yin

ABSTRACT

The objective of this project is to develop a prototype computer based factory oven. The prototype is used to show to the potential users that how the computer can be used to provide precise control of thermal process of a factory oven and enhance the standard of batch process control. Hardware and software will be developed in this project. In the software part, control function, remote access function, user level security and database management available.
