THE STUDY OF DISTRIBUTED FILE SYSTEM (DFS) IN CLIENT/SERVER COMPUTING AND THE IMPLEMENTATION OF A WEB-BASED VIRTUAL DRIVE BASED ON DFS CONCEPT BY USING JAVA PROGRAMMING LANGUAGE AND JAVASCRIPT

Prepared by: Wong Thien Pow

ABSTRACT

This project is aimed at frequent Internet user. Nowadays people intend to save lots of files while browsing Internet, but we would love to have a good software that helps us handling these files. Develop using C++, JAVA, this Windows platform application can schedule and resume downloading task. Furthermore it enables a user to store a large file into diskettes by breaking it into smaller portions. With the development of this software, user can have better control over their internet resources.
