DEVELOPMENT OF THE PEER-TO-PEER FILE TRANSFERRING APPLICATION FOR MULTIMEDIA FILE TRANSFER

Prepared by: Lim Teng Joan

ABSTRACT

This project studies and analyzes the existing software, which are using the peer-to-peer technology such as Napster. Nowadays, Napster has been one of the famous multimedia files transferring software where users used to download songs from other personal computers. Users can search the songs desired by keying in the artist name, song title and others by using the search engine. Besides users can also add other users and check for the songs they have in their library. The project will compare some of the software using this technology and analyzes their limitations. The project will enhance the features of the multimedia file transfer software, which are using the peer-to-peer technology
