

DEVELOPMENT OF A SMART HOUSE SYSTEM THAT PROVIDES SECURITY, MONITOR AND REMOTE CONTROL OF THE HOUSE'S APPLIANCES

Prepared by: Lim Eng Hee

ABSTRACT

In any given project, it is important that the understanding and analysis performed by the author should suit the project and in the end produce a good result. The author has presented this project by conveying all the knowledge, experience and results that he obtained. This report is basically centered on the body of the project that begin with states a basic introduction based on the Smart House System, followed by the objectives of the project, its functions and advantages. A full description of the components that being used and their functions, will also be discussed in this project documentation. The selection of language for the Smart House System and the explanation of the physical system and the explanation of the physical system model will be presented in the report. An introductory software user manual guide will also be given in the report. The process of collecting the information, research findings and the practical work are very important for producing this project.
