

A STUDY ON WORM AND IMPLEMENTATION OF A WARNING SYSTEM OF WORM UNDER LOCAL AREA NETWORK ENVIRONMENT

Prepared by: Li Li

ABSTRACT

This project conducts a study on various worms, techniques and programming languages. It studies on C, C++, Visual Basic, COM+ and DLL. There is a kind of virus that is called worm that will slow down the computer's CPU speed and network connection by duplicating itself into the particular location. The worm warning system will detect that kind of worm and also help to protect data and make sure the hardware and software work normally and precisely. This project is aimed to solve the effect of the worm problem
