

RESEARCH AND DEVELOPMENT OF WEB-BASED ORGANIZER FOR PERSONAL AND GROUP SCHEDULE

Prepared by: Ng She Ven

ABSTRACT

This project will do some research on current personal organizer available and develops a web-based organizer. The organizer provides the user a management system of their own and at the same time the user is able to share their schedule with others. Moreover, the development of web-based organizer enables the user to log on to their account and use the organizer from anywhere. The organizer helps the user in daily management and classification of personal information. The organizer should have the features of tasks scheduling, contact lists, reminder of appointments, and important events, classification of notes and memos. User can let other user in the same group view their schedule to provide a better arrangement and meetings and events. Ultimately, this project aims to do some research on various personal organizers and make some enhancements. The development or organizer enables the user to manage their daily life more systematically.
