A STUDY AND IMPLEMENTATION OF WEB-BASED DYNAMIC REPORTING SYSTEM FOR RSH MANUFACTURING SDN BHD

Prepared by: S.Pareemala

ABSTRACT

The proposed system allows corporate RSH Manufacturing to gain a better knowledge of their business by putting critical information in the hands of all those who need it instead of using manual approaches for addition tasks.

The main goal of this system can create a report dynamically depends on his think-in of the system users. Also the advantages of the system, is should allow to make a constraint report using relational and/or logical. So the author decided to make a system using Java Server Pages (JSP). The reason of choosing JSP as a language is because it can support networking workstation which allows assessing the proposed system to all machines under different platform. Under the LAN settings communication, host control used to control the unauthorized users to access the system. The system permissions and user accessing methods handled in a friendly and highly secured manner.
