

A COMPARATIVE STUDY BETWEEN THE JAVA AND C# IN DATA ENCRYPTION

Prepared by: Lee Sook Ching

ABSTRACT

WHEN Microsoft officially announced C#, on June 26, 2000, Java users have commented that C# is a spin-off from Java or that C# looks just like Java. In fact, C# and Java aren't the same thing or even that similar. The aim of this project is to explore Java and C# and attempts to compare both. It further describes how Java differs from the new C# through an implementation of data encryption application on using both languages.
