COVERT COMMUNICATION USING STEGANOGRAPHIC STENOGRAPHIC PSEUDO STORY ALGORITHM

Prepared by: Lee Kok Jien

ABSTRACT

This project will introduce the concept of data hiding by using steganography technology, which would allow the user to hide their data safely and unnoticed. The system will identify and analyses input data from the user and intelligently encode and convert it into other form of text for example simple message, sentence or words. Generally, this will act as a carrier of the secret message to the user and can be "hacker proof" security system. The main objective of this project is to provide a secure text communication system.
