

RESEARCH AND DEVELOPMENT OF AN EXPERT SYSTEM FOR PSYCHOLOGY THERAPY

Prepared by: Leong Sook Mun

ABSTRACT

This project investigates the areas of psychology therapy in order to produce an expert system for treatment of psychology. With the enhance of voice synchronization, this expert system will make it more user friendly than others. Possible suggested treatment would be generated after the users have specified the scope of psychology that is facing currently. This expert system will include individual psychotherapy, family therapy, and stress reduction, which will go in depth in this area.
