# RESEARCH AND IMPLEMENTATION OF WIRELESS TECHNOLOGY USING WAP TO INTEGRATE WITH E-MAIL APPLICATION

Prepared by: Lee Jun Rong

## ABSTRACT

As SMS technology has a number of limitations, the objective of this project is to overcome it by developing a WAP-based Email system. This email system has the aim to give users better additional features. Therefore, the author must conduct a thorough research in WAP and email for better understanding. Before conducting the research, the author has to go through thick and thin to know where to locate the resources and the various methods that can be applied in information gathering. Thus, the author will learn how to communicate with people, conduct research, analyze information and derive conclusion from the analysis.
