

# **A DEVELOPMENT OF WIRELESS APPLICATION OF PERSONAL DIGITAL ASSISTANT (PDA): TO ACCESS MANAGEMENT INFORMATION SYSTEM OF A BOOKSTORE**

Prepared by: Eddy Iskandar

## **ABSTRACT**

---

This project addresses issues related to accessing bookstore information. The project also aims to explore and understand the wireless technology available, which a global specification that enables mobile users with wireless devices for easy access and interaction with information and services. The project intended to explore the opportunities and constraints for developers in participating in the growth of the wireless technology and its implementation for the participating developer's business system with wireless- supported technology. The bookstore company will be greatly benefited from implementing this application because it will help enhance the bookstore's management, which increase effectiveness and efficiency in managing the bookstore's business.
