

DEVELOPMENT OF WIRELESS MARKUP LANGUAGE (WAP) BASED ORGANIZER

Prepared by: Soh Mung Cheong

ABSTRACT

The aim of this project is to study WAP technology and develop a WAP based organizer. WAP stand for wireless application protocol. WAP based organizer is a tool developed on the Internet. It is designed to enable daily planner and meeting reminder. It would be very convenient if there is always an Internet access through WAP enabled WAP mobile phone. WAP organizer has the function just like a common organizer on the Internet. It allows user to add event, edit event, delete event, and view under the calendar schedule function. In the bookmark function, it helps keep track of web addresses, which include add, modify, delete and search bookmark. Other function includes name card, which allows user to store friend's contact number and information.
