VIRTUAL LIBRARY FOR INTI COLLEGE MALAYSIA

Prepared by: Lam Chin Mui

ABSTRACT

This project is to develop a virtual library web based system to provide students and staff an easy accessed to the library information system. It will be available on the web and on the personal computer (PC) and support keyword based retrieval and direct visualization of titles in the "physical" library at INTI College Malaysia. Student can first perform a keyword based search of the titles on the web to check for its availability, and to view its cover page and table of contents of that particular book.
