SYSTEM RECOVERY SOLUTION IN THE COMPUTING ENVIRONMENT

Prepared by: Foo Heng Chin

ABSTRACT

As we know that, the computer is being widely use and the number of problems that may occurs in the computing environment are begin to increase. The recovery needs in the computing environment are becoming more and more important. This is due to the increase of action that the users can do with the computer. This project focuses on investigates the system recovery solution in the computing environment. It investigates about the user initiated changes in configurations and settings that caused the system failure. With this system recovery solution, the users can recover back all the files that were accidentally deleted or overwritten. Other than that, the proposed system also can help the user backup and restore Windows system files. A prototype will also be included with this project documentation, which includes all the functions and features described.
