STUDY ON CLIENT – SERVER AND IMPLEMENTATION OF SUPERMARKET MANAGEMENT INFORMATION SYSTEM FOR CENTRAL RAYA

Prepared by: Jhony Chandra

ABSTRACT

This project focuses on the study of supermarket management information system for Central Raya that will apply the Client-Server concepts. This system will be used by the manager and staff. The staff will use the system at the client side, while the manager will use at the server side. In order to sue this system, the user must register to the system, and it will be saved into the database at the server side. The system can be able to search, edit and saved any particular that the user look for by entering the specification of the information side, besides that the system can observe the supermarket information through the system. The system can make an order through the system. Besides that, to make transaction between cashier with the customer the system using barcode scanner to scan the product by using this system. The server will be able to control and check the clients or staffs activity.
