

AN ONLINE PHARMACY SYSTEM WITH E-COMMERCE APPLICATION

Prepared by: Cheong Wei Minn

ABSTRACT

Dramatic advances in technology has been revolutionized the way that people would not aspect it to be. With the importance and popularity in internet trading or E-Commerce, it has become an upcoming trend for most business to actually implement their business via this technology. In parallel with these technical advances, a system with E-Commerce application will develop, in order to understand the buying and selling process on the Internet, much deeper. This project study does not only involve the transaction segment in the Internet, but also its current issues and influence of E-Commerce into many businesses regardless of health, education or merely for trading purposes.
