

INTERACTIVE INTRANET APPLICATION IN WINDOWS NT ENVIRONMENT

Prepared by: Chaw Pei Chin

ABSTRACT

This project concentrated on the web server, mail server and the development of the corporate web pages. The web pages were made interactive by providing the features of interaction between the users and the system, in which the users are able to provide feedback and access to the database from their browsers. The application and the report of the special study project were successfully completed on time. In this report, there were results of the research done on Intranet and Windows NT. The report also includes the report on the development process of the Intranet applications.
