# INVESTIGATION AND DEVELOPMENT OF CDSHOP ONLINE ORDERING SYSTEM (CDSOS)

Prepared by: Cheng Fui Ling

## ABSTRACT

Cdshop Ordering System (CD-SOS) is an online CD ordering system to provide more efficient and effective stock ordering. The purpose of the CD-SOS is to centralize the CD information and provide the facility to purchase CD without leaving home. Through the system, customer can search and orders the CD only with a few mouse clicks; therefore, it saves time of searching the CD. Online ordering and purchasing is extremely common and popular in Internet. CD-SOS provides online ordering, searching, and information of best selling CD and other services to the clients. The detailed information about the language used; security features of electronic transaction to prevent from authorized security including the technology of Secure Electronic Transaction (SET) and Secure Sockets Layer (SSL); the process of online CD selling system are included in this project. Ultimately, this project aims to provide information about the online CD selling system and to provide the essential functions to customer via Internet.
