

# WEB-BASED INTI COLLEGE INFORMATION SYSTEM

Prepared by: Siew Soon Yik

## ABSTRACT

---

This project is use to enhance the current INTI website by developing the web-based INTI College Information System. This type of system is not only provide the college information to the student, but also attach the services such as online application registration. Based on the preliminary investigation, the current INTI website does not assist the student to achieve some things such as student can't create the account for secure their data, students cannot view their personal information and students cannot delete or change their personal information. Therefore, motivation to implement this project is to help the users. The scope of this project will basically cover the area of publishing and disseminating of information under the guideline of proper web design techniques, developing a website that act as a communication channel that facilitates the application of courses by student and the administrator can access it, applicant can create their personal file and can update it, and finally the administrator can view the applicant's profile and course applied with the linking database.
