

# A STUDY OF MORPHING TECHNIQUE IN COMPUTER GRAPHIC EDITING

Prepared by: Ng Jet Fong

## ABSTRACT

---

This project is to study about morphing technique, understand how morphing images develop. During investigation stage, some articles was reviewed about the morphing technique and get to know how to include morphing images into the web pages or other application. It was found that many people has used morphing techniques to develop different application and morphing images, even morphing process can categorize into different morphing style such as line morphing and point warping. The project has been carried out with the normal development stages following the objectives in the proposal. Objectives of the proposal have included the investigation stage, analysis stage, design stage and development stage. After some study on the information gathered, the author has decided to choose Morphing Editor to produce the morphing images. Then, the morphing image was used to develop a multimedia application.
