A STUDY ON WIRELESS MARKUP LANGUAGE (WML) AND ITS IMPACT TO EXTENSIBLE MARKUP LANGUAGE (XML)

Prepared by: Lee Meng Yee

ABSTRACT

The aim of the project is to study on markup language and it focuses on the development of wireless markup language (WML) in WAP technology and extensible markup language (XML) technology. Besides that, this project also addresses what is markup language and their development. This project investigates the strength of WML and how it can overcome the limitations of XML. They will be researches conducting on the similarity and differences between both markup languages. Then the project will introduce the on-line hotel reservation system to show the differences of both markup languages. The differences will be shown when the testing phase is implemented.
