A STUDY AND DEVELOPMENT OF HUMAN HEALTH CARE AND NUTRITION SYSTEM

Prepared by: Felicia Looi Suet Lee

ABSTRACT

The online health care and nutrition system is developed for the online customers to view the information on health care and purchase products from the web site. This system allows the user to view the images and understand the benefit of each of the products provided. The Health Care system provides systematically database to store and keep customer details ad product details. The system is developing by using Active Server Page script validated by JavaScript. The online customers are allowed to purchase products after they Login or Register as a member and their personal details will automatically store in the database itself. The products will be received by the user within two weeks. As to those viewers who do not want to register as member they can view the products itself. Besides that, the system provides administration site to let the administrative to add products, update products ad view guest comment. Quick search function, FAQs and weight calculation side are provided free for the users to access. The benefits of this system are to provide convenient for customers to order products. Finally, the purposed solution will be delivered.
