DEVELOPMENT OF AN INTERACTIVE ELECTRONIC AUCTION (INTERACT) USING ASP TECHNOLOGIES

Prepared by: Hoi Lai Yee

ABSTRACT

This project is to develop an interactive electronic auction (InterAuct) system, which allows user to involve in the bidding process. Basically, bidding is a simple process that allow user to sell and buy the item that they desired. They can bid the items such as antique, ladies fashion, gent fashion, vehicles, and so on. Sellers and buyers are required to register with InterAuct as a member before being allowed to bid or post items in the auction. It aims to ensure that buyers and sellers are acting in good faith bidding on an item through the system
