

# **A STUDY AND IMPLEMENTATION OF WAP TECHNOLOGY TO HOTEL RESERVATION SYSTEM**

Prepared by: Teo Sze Chang

## **ABSTRACT**

---

This project aims to develop a system that allows users to have the opportunity to access the services of Hotel Reservation System via WAP-enabled mobile phone. The purpose of developing this application is to study on how wireless application protocol works. Users will be able to expose themselves or enhance their knowledge regarding to technology of WAP. This project also focuses on discovering the constraints and the new technologies of WAP implementations. The project further proves that human beings will have a better life by using the WAP technology through accessing of mobile phone. By using this system, users can easily book hotel accommodation by just using a WAP-enabled mobile phone.
