TO STUDY THE EFFECTIVENESS OF USING MIS (MANAGEMENT INFORMATION SYSTEM) IN MANAGING A LOGISTICS COMPANY

Prepared by: Vinesh Kumar S/o Subramaniam

ABSTRACT

This MIS (Management Information System) helps to manage a logistics company. The primary aim of this system is to design management information that provides logistics company with a possible way to decide in financial ways. There will be three primary systems that the author is going to design to help company solve the problem that they face and that will be the invoice system, bank system and financial system. This system will benefit the logistics company by calculating financial report, statements and gross profits and losses. This system can run in any latest Windows operating system and it is easy to use. This system can also be used in networked environment where everyone can execute the data within the company.
