DEVELOPMENT A VB CODE BANK AS A LEARNING TOOL

Prepared by: Liew Woon Ping

ABSTRACT

A VB Code bank is basically a learning tool for beginners. When VB was first used, it was almost impossible to find a complete working project to learn for. By doing this research, the coding of VB will be stored into a database which purposely to ease users to find information for learning purposes. The interface format of the database will directly show the users to the source code based on their search.
